EXPANDED AND UPDATED EDITION

THE AZTEC ACCOUNT OF THE CONQUEST OF MEXICO
Introduction

On November 8, 1519, the Spanish conquistadors first entered the great city of Mexico, the metropolis the Aztecs had built on a lake island. Don Hernando Cortes, who was accompanied by six hundred Spaniards and a great many native allies, at last could see for himself the temples and palaces about which he had heard so many marvels. The Spaniards arrived from the direction of Tlapalpan, to the south of the city, passing across one of the wide causeways that connected the island with the mainland. When they reached a locality known as Xoloco, they were welcomed by the last of the Motecuhzomas,¹ who had come out to meet them in the belief that the white men must be Quetzalcoatl and other gods, returning at last from across the waters now known as the Gulf of Mexico. Thus Cortes and his men entered the city, not only as guests, but also as gods coming home. It was the first direct encounter between one of the most extraordinary pre-Columbian cultures and the strangers who would eventually destroy it.

Cortes landed on the coast at Veracruz on Good Friday, April 22, 1519; the Aztec capital surrendered to him on August 13, 1521. The events that took place between these two dates have been recounted in a number of chronicles and other writings, of which the best known are the letters Cortes wrote to King Charles V and the True History of the Conquest of Mexico by Bernal Diaz del Castillo. These two works, along with a few others also written by Spaniards, until now have been almost the only basis on which historians have judged the conquest of one of the greatest civilizations in pre-Columbian America.

But these chronicles present only one side of the story, that of the conquerors. For some reason—scorn, perhaps—historians have failed to consider that the conquered might have set down their own version in their own language. This book is the first to offer a selection from those indigenous accounts, some of them written
as early as 1528, only seven years after the fall of the city. These writings make up a brief history of the Conquest as told by the victims, and include passages written by native priests and wise men who managed to survive the persecution and death that attended the final struggle. The manuscripts from which we have drawn are now preserved in a number of different libraries, of which the most important are the National Library in Paris, the Laurenziana Library in Florence and the library of the National Museum of Anthropology in Mexico City.

The Indian accounts of the Conquest contain many passages whose dramatic interest is equal to that of the great classical epics. As Homer, singing in the Iliad of the fall of Troy, depicted scenes of the most vivid tragic realism, so the native writers, masters of the black and red ink, evoked the most dramatic moments of the Conquest. A few paragraphs from the documents presented in this book will make this clear.

The Indian chroniclers describe the beginning of the terrible slaughter perpetrated by Pedro de Alvarado in the patio of the main temple in Tenochtitlan. After mentioning the first rituals of the fiesta that was being celebrated—a fiesta in which “song was linked to song”—they tell how the Spaniards entered the sacred patio:

They ran in among the dancers, forcing their way to the place where the drums were played. They attacked the man who was drumming and cut off his arms. Then they cut off his head, and it rolled across the floor.

They attacked all the celebrants, stabbing them, spearing them, striking them with their swords. They attacked some of them from behind, and these fell instantly to the ground with their entrails hanging out. Others they beheaded: they cut off their heads, or split their heads to pieces.

They struck others in the shoulders, and their arms were torn from their bodies. They wounded some in the thigh and some in the calf. They slashed others in the abdomen, and their entrails all spilled to the ground. Some attempted to run away, but their in-
testines dragged as they ran; they seemed to tangle their feet in their own entrails. No matter how they tried to save themselves, they could find no escape.

Another passage, a masterpiece of the descriptive art of the Aztecs, shows how the Indians pictured the “stags or deer” on which the Spaniards rode. Motolinia, one of the early missionaries, wrote that the Indians “were filled with wonder to behold their horses, and the Spaniards riding on their backs.” Now they present their own description, so vivid that it recalls another extraordinary picture of the horse, written in Hebrew by the author of the Book of Job. They report:

The “stags” came forward, carrying the soldiers on their backs. The soldiers were wearing cotton armor. They bore their leather shields and their iron spears in their hands, but their swords hung down from the necks of the “stags.”

These animals wear little bells, they are adorned with many little bells. When the “stags” gallop, the bells make a loud clamor, ringing and reverberating.

These “stags,” these “horses,” snort and bellow. They sweat a very great deal, the sweat pours from their bodies in streams. The foam from their muzzles drips onto the ground. It spills out in fat drops, like a lather of amole.

They make a loud noise when they run; they make a great din, as if stones were raining on the earth. Then the ground is pitted and scarred where they set down their hooves. It opens wherever their hooves touch it.

The indigenous documents contain a number of scenes like these, so vivid that they seem to invite the artist to interpret them with his pen or brush. But to understand this epic narrative of the Conquest, it is important to know something of Aztec history, geography and culture. The following sketch is necessarily limited to the broad outlines, but at least it will provide a context in which the indigenous narratives can be seen more clearly.
The grandeur that the conquistadors beheld in the Aztec capital was obviously not the result of spontaneous generation. It was the last phase of a long cultural sequence beginning well before the Christian era. In this brief review of the evolution of culture in ancient Mexico, we will attempt to correlate the various stages with well-known events in the history of the Old World.

Although man has existed on earth for at least half a million years, the first human beings to reach the American continent appear to have arrived only about twenty thousand years ago. Man is an even more recent phenomenon in the Valley of Mexico, since the most ancient human fossil—discovered in Tepexpan, near the famous pyramids of Teotihuacan—is probably no more than ten thousand years old.

The development of superior cultural forms also came much later in America than in the Old World. Egypt and Mesopotamia had contrived modes of writing as far back as the fourth millennium before Christ; but in America—specifically in Mexico—we must wait until the middle of the second millennium B.C. before we can discover the earliest vestiges of systematic agriculture and the making of pottery.

The most ancient architectural remains in Mexico, indicating the presence of ceremonial centers, date from about five hundred years before Christ, a time when the Old World had already heard the words of the Biblical prophets, and when the first pre-Socratic philosophers had already spoken in Greece. Perhaps the earliest cultural ferment of any importance in pre-Columbian Mexico took place on the coast of the Gulf of Mexico. A number of extraordinary artifacts have been found there, along with the oldest calendar inscription yet discovered. For lack of a better name, these mysterious artificers have been called the Olmecs, an Aztec word meaning “people of the region of rubber.” At a later period their art, techniques and religious ideas influenced a num-

xxviii
ber of groups which had migrated from the distant northern shores of the Pacific Ocean. This cultural influence was to have significant and widespread consequences.

At the beginning of the Christian era, while Rome was consolidating her empire and Christianity had begun to spread through the Mediterranean world, Mexico witnessed the emergence of what can also be called true empires. The foundations of the earliest sacred cities of the Mayas—Tikal, Uaxactun, Copan and Palenque—were constructed in the jungles of Central America. And in the central region of Mexico, about thirty-five miles north of the modern capital, the great “city of the gods”—Teotihuacan—began to rise. Its pyramids, palaces, sculptures, frescoes and inscriptions would become a paradigm and inspiration for the artists and artisans of later peoples. Many of its inscriptions and representations of the gods were reproduced in the Aztec art and codices of the Conquest period. The apogee of Mayan and Teotihuacan culture coincides in time with the fall of the Roman Empire.

During the fourth and fifth centuries A.D. inscriptions based on a partly ideographic, partly phonetic mode of writing became extremely abundant, especially among the Mayas. They testify to the fact that these cultures possessed a profound sense of time and history. The Mayan calendar is further proof, for it was slightly closer to the astronomical year than our own present-day calendar, and much closer than that being used in Europe at the same period.

The great ritual centers at Teotihuacan and in the Mayan area began to decline in the eighth and ninth centuries and were eventually abandoned. The causes are for the most part unknown. Some authors have attributed their downfall to the arrival of new tribes from the north; at least it is certain that the northern barbarians—like the Germanic tribes in the Roman world—were a constant threat to established cultures. In Europe the ninth century saw the consolidation of feudalism; a little later new kingdoms were founded within a cultural milieu composed of Greco-Roman and barbarian elements. A new state also arose in central Mexico and culturally it was also a composite, having been greatly influenced
by the Teotihuacan civilization. This was the so-called “Toltec Empire,” composed of people from the north who spoke the same Nahuatl tongue which a few centuries later became the language of the Aztecs.

The Toltecs settled in Tula, about fifty-five miles northeast of the City of Mexico, and under the aegis of their great culture-hero, Quetzalcoatl, they gradually extended the civilization created at Teotihuacan. A number of indigenous texts describe the Toltecs in detail: they were superb artisans, devout worshipers, skillful tradesmen—extraordinary persons in every way. Their prestige became so great that for the Aztecs the word “Toltec” was a synonym for “artist.” The cultural achievements of the Toltecs spread far beyond their city at Tula; in fact their influence even reached down into Yucatan and Central America, where it can be clearly discerned in the Mayan religious center at Chichen-Itza. As a result of these Toltec influences, the Mayas experienced a major cultural renascence.

But Tula, like other cities before it, was finally abandoned, perhaps because of fresh invasions from the north. Quetzalcoatl departed eastward, promising that some day he would return from across the sea. The new arrivals adopted the cultures of Teotihuacan and the Toltecs, and a number of city-states began to form along the shores of the great lake in the Valley of Mexico. This was the beginning of another cultural renascence, almost exactly contemporaneous with the early Renaissance in Italy.

In the thirteenth century two of the city-states achieved considerable splendor. One of them, the famous Culhuacan, was located on the southern shore of the lake, near what is now the University of Mexico. Much of its greatness resulted from the fact that many of its inhabitants were of Toltec origin. The other state, Azcapotzalco, which now forms part of the northeastern sector of the capital, was a mixture of a great many ethnic groups. Its people were especially gifted as warriors and administrators, and Azcapotzalco therefore became a good deal more powerful than its neighbor to the south.

XXX
The Aztecs of Mexico were the last of the many nomadic tribes to enter the Valley of Mexico from the north. They arrived during the middle of the thirteenth century, and attempted to settle in one or another of the flourishing city-states, but wherever they appeared, they were violently driven away as undesirable foreigners. It is true that they spoke the same language as the old Toltecs, but otherwise they were almost totally uncultured. The only heritage they brought with them, besides the Nahuatl tongue, was an indomitable will.

After a whole series of defeats and humiliations, the Aztecs succeeded in establishing themselves on an island in the lake; the ancient codices state that their city was founded in the year 1325. A little more than a century later, incredible as it may seem, this destitute tribe had been able to assimilate the old cultural traditions and, at the same time, to achieve complete independence. Then they began their career as conquerors, extending their rule from the Gulf coast to the Pacific and as far south as Guatemala—and again they accomplished all this in only one century. Their capital grew rich and powerful, much more powerful than Teotihuacan or Tula had ever been. Its temples, palaces and gardens were so magnificent that the Spanish conquistadors gaped in astonishment.

During this same period, however, the Old World had begun to discover new regions. Portuguese navigators reached Madeira and the Azores between 1416 and 1432—the first step toward the discovery of the New World. Other explorers crossed the Equator off the coast of Africa in about 1470, and in 1487 Bartolomew Diaz sailed as far as the Cape of Good Hope. Less than a decade later Christopher Columbus landed on the shores of America. Hence, the "explosion" which spread Aztec rule and planted Aztec culture over vast regions was contemporaneous with another expansionist movement, and the latter, with superior weapons, techniques and tactics, proved much the more powerful. When the Old World and the Aztecs in the New World met face to face on that November day in 1519, their attitudes toward each other were
very different. The Aztecs, as we have said, thought the strangers were Quetzalcoatl and other gods returning from over the sea, while the Spaniards—despite their amazement at the splendors of Tenochtitlan—considered the Aztecs barbarians and thought only of seizing their riches and of forcing them to become Christians and Spanish subjects.

This confrontation, vividly described both by the conquistadors and the natives, was something more than a meeting between two expanding nations; it was the meeting of two radically dissimilar cultures, two radically different modes of interpreting existence. Spain had recently brought the long wars of reconquest against the Moors to a triumphant conclusion and was now the greatest power in Europe. The Aztec state had also reached a climax, and its magnificence was evident in its capital city and its vigorous religious, social, economic and political structure. To understand more clearly the tragic loss that resulted from the destruction of indigenous culture, it will be useful to view the great city as the “gods” viewed it before they leveled it to the ground.

**Tenochtitlan, the Aztec Metropolis**

The beginnings of the Aztec capital were very humble. It was founded on a low-lying island so undesirable that other tribes had not bothered to occupy it. The indigenous chronicles describe the difficulties with which the Aztecs managed to build a few miserable huts and a small altar to their supreme deity, the war-god Huitzilopochtli. But their fierce will overcame every obstacle. Less than two centuries later, the Spanish conquistador Bernal Diaz del Castillo thought that the wonders he beheld must be a dream. The Spaniards had been welcomed into the city as guests of Motecuhzona, and a party of them—led by Cortes—climbed up to the flat top of the pyramid on which the main temple was built. They were met by the Aztec king himself, who pointed out the various sights.
Pre-Columbian Mexico-Tenochtitlan
So we stood looking about us, for that huge and cursed temple stood so high that from it one could see over everything very well, and we saw the three causeways which led into Mexico, that is the causeway of Iztapalapa by which we had entered four days before, and that of Tacuba, and that of Tepeaquilla, and we saw the fresh water that comes from Chapultepec which supplies the city, and we saw the bridges on the three causeways which were built at certain distances apart through which the water of the lake flowed in and out from one side to the other, and we beheld on that great lake a great multitude of canoes, some coming with supplies of food and others returning loaded with cargoes of merchandise; and we saw that from every house of that great city and of all the other cities that were built in the water it was impossible to pass from house to house, except by drawbridges which were made of wood or in canoes; and we saw in those cities Cues [temples] and oratories like towers and fortresses and all gleaming white, and it was a wonderful thing to behold; then the houses with flat roofs, and on the causeways other small towers and oratories which were like fortresses.

After having examined and considered all that we had seen we turned to look at the great market place and the crowds of people that were in it, some buying and others selling, so that the murmur and hum of their voices and words that they used could be heard more than a league off. Some of the soldiers among us who had been in many parts of the world, in Constantinople, and all over Italy, and in Rome, said that so large a market place and so full of people, and so well regulated and arranged, they had never beheld before.

The Spanish soldier had good reasons for describing the city in such enthusiastic terms. Almost nothing remains today of what he saw, but his account is corroborated by other writings, ancient maps and archaeological investigations.

At the time of the Conquest, the area of the island on which the city stood had been increased by means of fills, until it comprised a more or less regular square measuring about two miles on each side. It was joined on the north to the island of Tlatelolco, originally an independent city, but annexed by the Aztecs in 1473. Tlatelolco was connected with the mainland by a causeway that
ran to the sanctuary of the mother-goddess Tonantzin on the northern shore of the lake. At the present day the site of her temple is occupied by the Basilica of Tepeyac, dedicated to Mexico’s patron saint, the Virgin of Guadalupe.

To the south of Tenochtitlan, another causeway—the one by which the Spaniards entered—joined the mainland at Iztapalapa. The eastern edge of the city bordered the wide expanse of the lake, and only during the clearest weather was it possible to see the city of Tezcoco, home of the famous poet-king Nezahualcoyotl, on the opposite shore. Finally, on the west, another causeway joined the city with the allied kingdom of Tlacopan or Tacuba; it was along this causeway that the Spaniards fled on the disastrous Night of Sorrows.

Tenochtitlan was divided into four great sections. To the northwest stood Cuicopan, “the place where flowers bloom,” which now forms the barrio or sector known as Santa Maria la Redonda; to the southwest, Moyotlan, “the place of the gnats,” later dedicated by the Spanish missionaries to the honor of St. John the Baptist; to the southeast, Teopan, “the place of the gods,” which included the precinct of the main temple and which was known in colonial times by the name of San Pablo; and to the northeast, Atzacoalco, “in the house of the herons,” which became the site where the missionaries built the church of San Sebastian.

The two most important places in the capital were the sacred precinct of the main temple, with its related temples, schools and other structures (in all, it contained seventy-eight buildings), and the huge plaza in Tlatelolco that served as the principal market place, offering an astonishing variety of products from far and near. The walled precinct of the main temple formed a great square measuring approximately five hundred yards on each side. Today nothing is left of the temple except a few remains that can be seen near the eastern walls of the Cathedral of Mexico. A model of the precinct has recently been installed there.

The palace of Axayacatl, who ruled from 1469 to 1481, stood on the western side of the main temple, and it was here that the
Spaniards were lodged when they arrived in the city as Motecuhzoma's guests. The palace of Motecuhzoma, facing a broad plaza, stood on the site now occupied by the National Palace of Mexico. And in addition to these and other structures, there was a large number of lesser temples and stone and mortar buildings reserved as living quarters for the nobles, merchants, artists and other persons. The streets of Tenochtitlan were comparatively narrow, many of them with canals through which canoes from the lakeshore could reach the center of the city. The capital boasted many other attractions, and the Spaniards were particularly impressed by the botanical and zoological gardens, as nothing of the kind existed at that time in their native land.

The population of Tenochtitlan at the time of the Conquest has been the subject of considerable controversy, but beyond question it must have amounted at least to a quarter of a million. The activities were many and colorful. Fiestas, sacrifices and other rituals were celebrated in honor of the gods. Teachers and students met in the various calmecac and telpuchcalli, the pre-Hispanic centers of education. The coming and going of merchant canoes and the constant bustle in the Tlatelolco market impressed the Spaniards so much that they compared the city to an enormous anthill. The military exercises and the arrival and departure of the warriors were other colorful spectacles. In brief, the life of Tenochtitlan was that of a true metropolis. The city was visited by governors and ambassadors from distant regions. Gold, silver, rich feathers, cocoa, bark paper and other types of tribute, along with slaves and victims for the human sacrifices, streamed in along the streets and canals. The Spaniards were right: Tenochtitlan was indeed an anthill, in which each individual worked unceasingly to honor the gods and augment the grandeur of the city.

*The Aztec Empire*

The wealth and military power of Tenochtitlan were a result of the conquests accomplished by Itzcoatl, who ruled between
1428 and 1440. He had joined with Nezahualcoyotl, king of Tezco, to defeat Azcapotzalco and to form the so-called "triple alliance," made up of Tenochtitlan, Tezcoco and the relatively insignificant city of Tlacopan (Tacuba).

Another important factor in the growth of Aztec power was the shrewd work of the royal counselor Tlacaelel, nephew to Itzcoatl, who instituted a number of significant reforms in the tribe's political, religious, social and economic structure. As a profound student of the cultural elements inherited from the Toltecs, he made use of everything that served his purpose—but he also gave everything a special slant, for his purpose was to consolidate the strength and wealth of the city. One of the indigenous texts in the Codice Mattrinense describes how Itzcoatl and Tlacaelel rewarded the principal Aztec chieftains with lands and titles after the victory over Azcapotzalco, and then says that the king and his adviser decided to give their people a new version of Aztec history.

They preserved an account of their history,
but later it was burned,
during the reign of Itzcoatl.
The lords of Mexico decreed it,
the lords of Mexico declared:
"It is not fitting that our people
should know these pictures.
Our people, our subjects, will be lost
and our land destroyed,
for these pictures are full of lies....

In the new version, recorded in a number of extant documents, the Aztecs claim to be descended from the Toltec nobility, and their gods—Huitzilopochtli in particular—are raised to the same level as the ancient creative gods Tezcatlipoca and Quetzalcoatl. But most important of all is the exalted praise given to what can only be called a mystical conception of warfare, dedicating the Aztec people, the "people of the sun," to the conquest of all other nations. In part the motive was simply to extend the rule of Tenochtitlan, but the major purpose was to capture victims for
sacrifice, because the source of all life, the sun, would die unless it were fed with human blood.

As a result, Huitzilopochtli ceased to be the tutelary god of a poor band of outcasts, and his rise to greatness coincided with that of the Aztecs themselves. The old Toltec prayers, most of them directed to Quetzalcoatl, were revised in his favor, and his priests composed a number of others. Since he was identified with the sun, he was called “the Giver of Life” and “the Preserver of Life.” Tlacaelel did not originate the idea that Huitzilopochtli-the-Sun had to be fed the most precious food of all—human blood—but he was unquestionably responsible for the central importance that this idea acquired in the Aztec religion.

There is good evidence that human sacrifices were performed in the Valley of Mexico before the arrival of the Aztecs, but apparently no other tribe ever performed them with such frequency. The explanation seems to be that Tlacaelel persuaded the Aztec kings (he was counselor to Motecuhzoma I and his successor Axayacatl after the death of Itzcoatl) that their mission was to extend the dominions of Huitzilopochtli so that there would be a constant supply of captives to be sacrificed. Fray Diego de Duran wrote that Itzcoatl “took only those actions which were counseled by Tlacaelel,” and that he believed it was his mission “to gather together all the nations” in the service of his god. It was also Tlacaelel who suggested the building of the great main temple in Tenochtitlan, dedicated to Huitzilopochtli. Before the Spaniards destroyed it, it was the scene of innumerable sacrifices of captives, first from nearby places and later from such distant regions as Oaxaca, Chiapas and Guatemala.

The changes brought about by Tlacaelel in Aztec religious thought and ritual were his most important accomplishments, but he also reformed the judicial system, the army, the protocol of the royal court and the organization of pochtecas, or traveling merchants, and he even directed the creation of a large botanical garden in Oaxtepec, on the outskirts of Cuauhtla in the present-day state of Morelos. Despite his key role in Aztec history, Tlacaelel
never consented to become king, even though the nobles offered him the throne on the death of Itzcoatl in 1440 and again on the death of Motecuhzoma I in 1469. He preferred to be the “power behind the throne,” using his influence to realize what he considered to be the grand destiny of his people. He died a little before 1481, without suspecting, of course, that the magnificence and power for which he was so largely responsible would be destroyed in less than forty years. Considering the unquestionable brilliance of this unusual man, who has been seriously neglected by the historians, one is tempted to ask: What would have happened had the Spaniards arrived during his lifetime? The question is unanswerable, but at least it is an interesting topic for speculation.

To return for a moment to the conquests inspired by Tlacaelel’s advice, they began, as we have seen, with the defeat of Azcapotzalco and the formation of the alliance with Tezcoco and Tlacopan. Then the Aztecs set out to conquer the other city-states around the lake, and one by one Coyoacan, Cuitlahuac, Xochimilco and Chalco were forced to submit. Other states, alarmed by the Aztecs’ growing power, elected to sign treaties with Tenochtitlan and to deliver it tribute. Among these was the city-state of the Tlahuicas, a people with the same language and culture as the Aztecs, in the southern part of what is now the state of Morelos.

Next the Aztecs marched eastward toward the Gulf coast, where the people of Cempoala also agreed to pay tribute. It was in Cempoala that the Spaniards later took excellent advantage of the enmity the Cempoaltecas bore toward their masters.

The succeeding phase of Aztec expansion was toward the south. Sometimes the armies arrived as conquerors, at other times in search of trade, but their constant aim was to increase the power of Tenochtitlan. They dominated the present-day states of Oaxaca and Chiapas, penetrated into Guatemala and even—according to some accounts—reached the Isthmus of Panama, sending or bringing back tribute and trade goods to their capital.

The Aztecs, however, always respected the independence of
their neighbors, the Tlaxcaltecas, whose state was a “confederation of four republics.” There is no doubt that Tenochtitlan could have overwhelmed Tlaxcala without too much difficulty, and the reason it did not is probably that it wanted a nearby source of victims for the human sacrifices. Therefore the Aztecs maintained an almost perpetual state of war with Tlaxcala, but never actually conquered it. Also, the Aztecs seem to have regarded the frequent battles as a convenient way of testing and training their younger warriors. This situation was so hateful to the Tlaxcaltecas that when Cortes arrived they became his most loyal native allies, in the hope that with the aid of the strangers they could at last defeat their oppressors.

By 1519 the Aztecs ruled over several million human beings, who spoke a variety of languages. Their empire stretched from the Pacific Ocean to the Gulf coast and from central Mexico to the present-day Republic of Guatemala. The swift growth of their wealth and power naturally resulted in significant changes in their old way of life. The incipient social classes were consolidated, and the social-political structure became so elaborate that the Spanish conquistadors found it almost as astonishing as some of the city’s architectural wonders.

**Aztec Society**

The stratification into social classes of what had been a mere band of nomads developed in a rather unusual way. Once the Aztecs made contact with the advanced peoples who had inherited Toltec culture, they acquired a profound admiration for them and wanted to link themselves to the Toltec world by bonds of kinship. Hence, they chose as their first king, or tlatoani, a nobleman of Toltec origin named Acamapichtli from Culhuacan. He fathered a great many children by various Aztec women, and his descendants formed the nucleus of the social class of nobles, or pipiltin, which
increased rapidly both in size and importance. The pipiltin received a much fuller education than other persons, were allowed to own land in their own names and filled the most important posts in government; the king, or tlatoani, could be chosen only from their ranks.

The ordinary citizens formed the social class of the macehualtin. They were divided into what have been called geographical clans, that is, groups of related families living in specific localities and making communal use of the land assigned to them. Like the pipiltin, the macehualtin were required to attend the communal schools, but they were not taught reading, writing, astrology, theology or the other cultural legacies of the Toltecs. They were trained in agriculture and warfare, and some of them became members of the artisan and merchant guilds.

In addition to these two major classes, there were also the mayeques, who worked the land for others as slaves or serfs (though almost always for a limited period of time), and a considerable number of actual slaves. It is necessary to point out that neither the mayeques nor the slaves were clearly distinguished from the macehualtin as social classes.

In Tenochtitlan, Tezcoco and other cities there were groups of wise men known as tlamatinime. These scholars carried on the study of the ancient religious thinking of the Toltecs, which Tlacaeleh had transformed into a mystical exaltation of war. Despite the popularity of the cult of the war-god, Huitzilopochtli, the tlamatinime preserved the old belief in a single supreme god, who was known under a variety of names. Sometimes he was called Tloque-Nahuaque, “Lord of the Close Vicinity,” sometimes Ipanemohuani, “Giver of Life,” sometimes Moyocoyatzin, “He who Creates Himself.” He also had two aspects, one masculine and one feminine. Thus he was also invoked as Ometeotl, “God of Duality,” or given the double names Ometecuhtli and Omecihuatl, “Lord and Lady of Duality,” Mictecacihuatl and Mictlantecuhtli, “Lord and Lady of the Region of Death,” and others.

It is quite clear that to the tlamatinime the long list of names
was merely a set of titles for a single god, but the people believed it referred to a whole pantheon of separate deities. This, along with the addition of tutelary gods like Huitzilopochtli, caused the Spaniards to regard the Aztecs as an incredibly idolatrous and polytheistic nation. But a closer analysis of the religious thought of the *tlamatinime* reveals that at least on the upper social levels, only one god was worshiped in Tenochtitlan: the Lord of Duality, the Giver of Life.

**Warfare in Ancient Mexico**

After Tlacaelel inculcated the idea that Huitzilopochtli—the-Sun had to be fed with the blood of human sacrifices, war became a cultural institution of primary importance in Aztec life, since war was the means of obtaining victims to appease the god’s insatiable hunger. Regardless of the ostensible purpose of a military campaign—to conquer new territory, punish a rebellious vassal state, or repel an aggressor—the Aztec warriors never forgot that their first duty was to take captives to be sacrificed. This religious conception of warfare motivated the expansion of the Aztec empire, but it also contributed to its destruction by the Spaniards. On several occasions the Aztecs probably could have wiped out the Spaniards to the last man—their best chance of all was on the Night of Sorrows—but the ceremonial elements in their attitude toward war prevented them from taking full advantage of their opportunities.

As in other cities in central Mexico, military training in Tenochtitlan began during early youth. The army was made up of squads of twenty men, which were combined to form larger units of about four hundred, under a *tiachcauh* who came from the same clan as the warriors he commanded. The more important leaders were usually Eagle or Jaguar Knights, with such titles as
tlacatecatl (chief of men) and tlacochochcalli (chief of the house of arrows).

The most important offensive weapon of the Aztecs was the macana, a sort of paddle-shaped wooden club edged with sharp bits of obsidian. It was so awesomely effective that on more than one occasion during the Conquest warriors beheaded Spanish horses at a single stroke. Other widely used arms were the atlatl, or spear thrower, bows and arrows of different sizes, blowguns and a variety of spears and lances, most of them with obsidian points. The defensive weapons were shields made of wood or woven fibers—often elaborately painted and adorned with feathers—and quilted cotton armor. Some of the warriors also wore various types of masks and headdresses to show that they were Eagle or Jaguar Knights or belonged to the higher military ranks.

A war or battle always commenced with a certain ritual: shields, arrows and cloaks of a special kind were sent to the enemy leaders as a formal declaration that they would soon be attacked. This explains the Aztecs’ surprise when the Spaniards, their guests, suddenly turned on them without any apparent motive and—more important—without the customary ritual warning.

Pre-Hispanic Education

For over a hundred years before the Conquest, education in Tenochtitlan was compulsory for all male children. They studied either in the specialized calmecac, of which there were at least six in the city, or the telpochcalli, which were attended by the great majority. The students in the calmecac were taught to read and interpret the codices and calendars; they also studied the tribe’s history and traditions, and memorized the sacred hymns and other texts. So much emphasis was placed on accurate memorization that after the Conquest it was possible to record many poems and tradi-
tions that would otherwise have been lost forever. Most of the students in the calmecac were sons of nobles or priests, but there is evidence that children of humble origin were sometimes admitted if they showed exceptional aptitude.

Almost every sector or clan in Tenochtitlan had its own telpochcalli, dedicated to the god Tezcatlipoca. The students were taught the fundamentals of religion and ethics, and were also trained in the arts of war. In comparison with the calmecac, the telpochcalli offered a more basic and practical education. As we have said, every boy had to attend one of these two types of schools, and every father had to make a solemn vow, on the birth of a son, that he would send the boy to school when he reached the proper age, which seems to have fluctuated between six and nine years.

Pre-Hispanic Writing and Calendars

The highest cultures in ancient Mexico—especially the Mayas, Mixtecs, Toltecs and Aztecs—succeeded in developing their own systems of writing, as we can see from their carved inscriptions and the few pre-Columbian codices that have been preserved. The Aztec system was a combination of pictographic, ideographic and partially phonetic characters or glyphs, representing numerals, calendar signs, names of persons, place names, etc. The Aztecs came closest to true phonetic writing in their glyphs for place names, some of which contained phonetic analyses of syllables or even of letters. For example, the sounds a, e and o were indicated by the symbols for water (atl), bean (etl) and road (otli). The paper used in the codices was made by pounding and burnishing strips of bark from the amate tree (ficus peziolaris). The illustrations in the present book have been adapted from post-Hispanic codices, of course, but the original artists used the old modes to depict their version of the Conquest.
Like the Mixtecs and Mayas, the Aztecs had two principal types of calendars. One was the xiupohualli, or “year-count,” based on the astronomical year and made up of eighteen groups or months of twenty days each, with a remaining period of five days, called nemontemi, “those who are there,” that was considered extremely unlucky. Despite the additional five days at the end, it became obvious that the calendar was moving ahead of the actual year, and therefore an extra day was added to every fourth year, as with our leap year. The other form of calendar was the tonalpohualli, or “day-count.” It was not based on the astronomical year, for its twenty months had only thirteen days each; instead it was calibrated to a fifty-two-year “century.” The xiupohualli and tonalpohualli were related in various ways, but the whole topic of pre-Hispanic calendars is far too complicated to be explained in a brief space. We have kept a few of the Aztec year, month and day names in this book, with explanatory footnotes where needed.

Indigenous Literature

The literary “remains” that have survived the Conquest and the intervening years are not as well known as the sculpture and architecture of ancient Mexico, but they are surprisingly rich and abundant. As we have seen, the Aztecs, Mayas and other peoples had their own modes of writing, and some of the pre-Conquest codices are still in existence. In addition, the system of memorization employed in the calmecac and telpochcalli preserved many of the ancient hymns, myths, epic narratives and other literary compositions. It is true that the Spanish conquistadors — along with certain churchmen — burned almost all of the codices and destroyed the pre-Hispanic centers of education. But a few remarkable missionaries, particularly Bernardino de Sahagun and Diego de Duran, undertook to gather up whatever they could of
indigenous literature. They managed to acquire a few codices that had escaped the flames, but their major accomplishment was to save a great many of the old songs and narratives that were still faithfully remembered after the Conquest. They worked out means of writing the native languages with the Latin alphabet, and this enabled them—and their Indian pupils—to record the texts in the original words.

Dr. Angel Maria Garibay K., the most important modern authority on pre-Hispanic literature, has shown that more than forty manuscripts containing Aztec literature are extant in various European and American libraries. They offer a broad range of literary types: religious, lyric, epic and dramatic poetry, and prose history, legends, moral teachings, etc. Some of them also present poems and prose narratives describing the Conquest, written or dictated in Nahuatl by persons who witnessed that tragic drama with their own eyes, and the major part of this book is made up of selections from these indigenous accounts. The Appendix gives a brief description of the main sources from which we have drawn.

Pronunciation of Nahuatl Words

The Nahuatl language, which is also known as Aztec or Mexican, is part of the great Uto-Aztecan linguistic family. It has been spoken in central and southern Mexico, as well as in various parts of Central America, from Toltec times to the present.

Written Nahuatl, using the Latin alphabet, was introduced by the Spanish missionaries soon after the Conquest. With the exception of ə, which is pronounced like the English ə, the letters have the same phonetic value as in Spanish.

Practically all Nahuatl words are accented on the next to last syllable. This is often indicated today by accents used according to rules of Spanish accentuation.
Conclusion

There were a great many other institutions and customs in ancient Mexico in addition to those we have described, of course, and many of them are relevant to the story of the Conquest in one way or another. But it is obviously impossible to describe the whole panorama of Aztec life within the limits of an Introduction. Therefore the reader interested in acquiring a more detailed knowledge of pre-Hispanic history and culture, or in comparing the native accounts of the Conquest with those of the Spaniards or of later historians, is referred to the Selected Bibliography.

We wish to express our profound gratitude to Dr. Angel Maria Garibay K., director of the Seminary of Nahuatl Culture at the University of Mexico, for his generosity in permitting us to make unrestricted use of his Spanish translations of many Nahuatl texts. We are also grateful to Alberto Beltran for the many pen-and-ink drawings that illustrate this book. They are faithful representations of the indigenous originals.

Finally, we wish to make it clear that this book is not a critical edition of the native texts. We have prepared it for the general reader, and although we could not avoid the use of footnotes, we have tried to keep them to a minimum. Our greatest hope is that this modest work will create further interest in the native accounts of the Conquest. A calm examination of the encounter between two worlds, the Indian and the Spanish, from whose dramatic union Mexico and Latin America in general are descended, will help us to understand one of the most profound sources of the conflicts, grandeur and miseries of that large portion of our hemisphere.

xlviii
The Spaniards spelled his name Montezuma. In present-day Mexico it is usually spelled Moctezuma.

In Nahuatl symbolism, the juxtaposition of these two colors signified wisdom.

A quilted cotton tunic soaked in brine. The Spaniards adopted it from the Indians because it was superior to their own armor in hot weather.

The name of several different plants used as soap.
